

Antirrhinum (SNAPDRAGONS)

French Varieties

F1 Hybrids. Excellent value

It is important to choose a variety from the correct response group. Snapdragons are heat and light responsive and are grouped as outlined below. Snapdragons can be grown under various light intensities provided a variety with the correct response group is selected. Temperature affects the overall growth rate, but it is daylength and quantity of light, which are the most important factors which influence flower initiation.

Group (1) Short days, low light and night temperatures of 7-10°C (mid winter flowering Sth Island)

Group (2) Short days, (but not as short as group 1), moderate light and night temperatures of 10-13°C (mid winter flowering Nth Island)

Group (3) Medium to long days, moderate to high light and night temperatures of 13-16°C (Spring, summer, autumn flowering NZ wide)

Group (4) Long days, high light and night temperatures higher than 16°C (Forcing types for flowering under longest days and high temperatures)

VINCENOT	white	3
MISTRAL	white	1
CORNEILLE	white	2-3
RACINE	white	3
BOILEAU	ivory white	3
DAUDET	light orange	3
LA FONTAINE	light orange	1-2
BRASSENS	light orange	3
MOLIERE	orange	2
ROUSSEAU	light orange	3
SAND	pink	3
COLETTE	pink	3
